

MYNTRA SALES PERFORMANCE & PROFIT ANALYSIS

1. INTRODUCTION

Introduction

This project focuses on analyzing Myntra sales and profit data using Python and Power BI. The project includes sales analysis, profit analysis, category-wise analysis, state-wise sales analysis, payment mode analysis, and dashboard visualization.

The analysis was performed using raw and cleaned Myntra datasets along with Power BI dashboards.

The project helps in understanding:

- sales performance
 - profit trends
 - category-wise sales
 - state-wise sales
 - payment mode preferences
 - monthly sales trends
-

2. PROBLEM STATEMENT

Problem Statement

Analyzing large amounts of sales data manually is difficult and time-consuming. There is a need to analyze Myntra sales and profit data using dashboards and visualizations to understand sales trends and category performance.

3. PROJECT OBJECTIVES

Objectives of the Project

The main objectives of this project are:

1. To analyze Myntra sales and profit data.
 2. To identify category-wise sales and profit performance.
 3. To analyze state-wise sales distribution.
 4. To analyze payment mode preferences.
 5. To visualize monthly sales trends using dashboards and charts.
-

4. PROJECT SCOPE

Scope of the Project

This project focuses on analyzing Myntra sales data using Python and Power BI.

The project includes:

- data cleaning
- sales analysis
- profit analysis
- dashboard visualization

The analysis helps users:

- monitor sales performance
- analyze category-wise sales
- analyze profit trends
- analyze state-wise sales performance
- analyze payment mode trends

The scope of the project is limited to the available dataset and dashboard analysis.

5. DOMAIN OVERVIEW

E-Commerce Sales Analysis Overview

E-commerce companies use dashboards and sales analysis to monitor sales performance and profit trends.

Dashboards help in:

- tracking sales performance
- analyzing category-wise sales
- monitoring profit trends
- analyzing state-wise sales
- visualizing monthly sales trends

This project demonstrates sales analysis and dashboard visualization using Myntra sales data.

6. WHY THIS PROJECT IS IMPORTANT

Importance of the Project

This project is important because:

- sales analysis helps in understanding sales trends
- dashboards simplify sales monitoring
- profit analysis helps in understanding category performance
- visual analysis improves understanding of sales data

The project also demonstrates:

- dashboard creation
 - sales analysis
 - profit analysis
 - data visualization
-

7. TECHNOLOGIES USED

Technologies Used

Technology	Purpose
Python	Data cleaning and analysis

Pandas	Data manipulation
Jupyter Notebook	Project analysis
Microsoft Power BI	Dashboard creation and visualization
CSV Dataset	Dataset storage

8. DATASET DESCRIPTION

Dataset Description

The dataset used in this project contains Myntra sales and transaction-related information.

The dataset includes:

- product categories
- sub-categories
- sales amount
- profit values
- quantity sold
- payment modes
- monthly sales data
- state-wise sales information

Important Features

Feature	Description
Category	Product category
Sub-Category	Product sub-category
Sales	Total sales amount
Profit	Profit generated
Quantity	Quantity sold
Payment Mode	Customer payment method
State	State-wise sales location

Month

Monthly sales information

9. METHODOLOGY

Project Methodology

The project follows the following methodology:

Step 1 — Data Collection

Raw Myntra datasets were collected and imported.

Step 2 — Data Cleaning

Data cleaning and preprocessing were performed using Python.

Step 3 — Data Analysis

Sales trends and profit analysis were performed using cleaned datasets.

Step 4 — Dashboard Development

Power BI dashboards were created to visualize sales and profit analysis.

Step 5 — Insight Analysis

Sales and profit insights were identified from dashboard analysis.

10. DASHBOARD INSIGHTS

Key Dashboard Insights

The dashboard analysis highlighted:

- Total Sales: 438K
- Total Profit: 37K
- Profit Margin: 8.44%
- Total Orders: 500

- Total Quantity Sold: 5615

Additional observations:

- Electronics category showed the highest sales.
- Maharashtra recorded the highest sales.
- COD was the most used payment mode.
- Printers showed the highest profit among sub-categories.
- Monthly sales trends varied across different months.

The dashboard provides:

- category-wise sales analysis
 - profit analysis
 - state-wise sales analysis
 - payment mode analysis
 - monthly sales trend visualization
-

11. EXPECTED OUTCOMES

Expected Outcomes

After completion of the project, the analysis should help in:

- understanding sales performance
 - analyzing profit trends
 - monitoring category-wise sales
 - analyzing payment mode preferences
 - visualizing monthly sales trends
-

12. FUTURE ENHANCEMENTS

Future Enhancements

Future improvements may include:

- additional dashboard visualizations
- enhanced sales analysis

- advanced reporting features
-

13. CONCLUSION

Conclusion

This project demonstrates sales and profit analysis using Myntra sales datasets and Power BI dashboards.

The project includes data cleaning, sales analysis, profit analysis, and dashboard visualization to analyze category-wise sales, payment modes, monthly sales trends, and state-wise sales performance.
